

AltaVista Search

Intranet 97

Product Description

You know the information is somewhere on your intranet, on your extranet, on a World Wide Web site, on a file server or on a Domino server your people frequently use? But, where is it exactly? AltaVista Search Intranet 97 lets you build your own search and retrieval site for your employees, business partners and customers. Everyone can find what they need quickly and easily.

Unlock business information all across your enterprise network - with AltaVista Search Intranet 97. This incredibly powerful search and retrieval software takes the proven capabilities of AltaVista Search Public Service and extends them to your organizations private information. So anyone, anywhere in your enterprise can get the useful information they need to be more effective and more productive. If it is on your intranet, your extranet, on selected World Wide Web sites, on your file servers or on your Domino servers AltaVista Search Intranet 97 will find it.

Features / Functions and Benefits

- Looks, feels and behaves like AltaVista Search on the World Wide Web, the world's most popular search site. This means users do not need extra training to use it.
- Seamlessly integrated with AltaVista Search on the World Wide Web.
- Provides search and retrieval services to Web server, file server and Domino server information.
- Fast, efficient index is always up to date and available to all your users. AltaVista Search Intranet 97 finds every word / number on Web pages within your Intranet and selected World Wide Web sites.
- AltaVista Search Intranet 97 also finds over 200 types of information including HTML, text, word processing documents, presentations and spreadsheets. It finds PostScript and PDF files. AltaVista Search Intranet 97 also finds information stored inside ZIP files.
- AltaVista Search is language independent and the user interface is available in 23 languages. One search server can meet the needs of people all over the world.
- AltaVista Search Intranet 97 is the most scalable Web search software available today. One AltaVista Search Intranet 97 server easily handles the largest, multi-national Intranets.
- AltaVista Search Intranet 97 is Year 2000 compliant.

How It Works

Using the same super-spider technology as Digital's AltaVista Search Public Service, the Intranet 97 crawls all the Web servers throughout your enterprise, selected World Wide Web sites and Domino servers. It also gathers information from file servers. Every word in every HTML page, text document, PC application file, PDF file and PostScript file is indexed.

Then, opening your Web browser to an AltaVista Search page, you can search for all the Web pages and information files that contain the words or phrase you specify. A listing of results is presented in seconds. Each item in the listing is hyperlinked directly to the Web page referenced.

AltaVista Search Intranet 97 also supports the Robot Exclusion standard. This means you can control the information sources you index via the AltaVista Search Intranet 97 administration interface or at the information source itself.

AltaVista Search Intranet 97 will search and index terabytes of Web data - easily scaling upward as your Web-based information repositories grow. Ideal for multi-national intranets.
